- b) A minimum of 15 feet (15') of slack shall be coiled in the cabinet (or a separate enclosure designed for this purpose) at each end to allow for future re-termination, relocation, etc. Every fiber shall be terminated using 568SC (duplex SC) connectors (or other duplex small form factor connectors complying with ANSI/TIA/EIA-568-B as requested by the Authorized User) in either a wall-mount fiber cabinet or a rack-mount fiber cabinet at the option of the Authorized User. The Authorized User must agree to any deviations from this configuration in advance of start of work and in writing. All fiber cabinets must include all hardware necessary to properly mount, mate and align the associated backbone fiber connectors with the appropriate patch cord connectors.
- c) The Contractor shall provide optical fiber patch cord(s) appropriate to the backbone fibers installed complying with TIA/EIA-568-B.3 in the quantities and lengths requested to be used with the Contractor-installed backbone links. Hybrid patch cords shall be supplied where required for interfacing to end equipment with non-duplex SC (568SC) connectors. A dust cover/dust cap shall protect each connector not physically connected to a patch cord or equipment cable.

## IFB 2010-25 REQUIREMENTS

- d) All innerduct, fiber cabling, cabinets, connectors, and supporting hardware shall be provided by the Contractor and installed according to all applicable standards and the manufacturer's recommendations.
- e) All optical fiber cabling, connectors, and hardware shall meet the minimum performance standards of, and be installed, terminated, and tested as specified in ANSI/TIA/EIA-568-B. Testing shall be performed in accordance with and pass the requirements of ANSI/TIA/EIA-568-B.1. Certified documentation of the passing test results showing all test parameters shall be presented to the Authorized User upon completion of work.

### C. Telecommunications Room (TR) Requirements

1. Backboards – When backboards are recommended by industry standards or requested by the Authorized User, provide and install 8-foot tall by 4-foot wide trade size  $\frac{3}{4}$  AC-grade void-free plywood backboards painted with a light-colored fire-retardant paint. The Authorized User must agree to any deviation from this standard board size in writing in advance. The boards shall be either fire-rated or treated on all sides with at least two coats of fire-resistant paint. Use flush hardware and supports to mount the plywood, ensuring that the strength and placement of the hardware are sufficient to handle the total anticipated load and mounting of cabling and components.
2. Distribution Racks – When distribution racks (equipment racks) are recommended by industry standards or when they are requested by the Authorized User because sufficient space is not available in the existing distribution racks for wiring being installed under this Contract, provide and install racks designed for standard 19" TIA/EIA mounting. Contractor shall supply racks both approximately seven feet (7') tall and three to four feet (3' – 4') tall. Racks shall be properly grounded, and anchored to the floor unless otherwise requested by the Authorized User. Contractor shall also supply swing-out (hinged/pivoting) wall-mount racks 35 to 48 inches (35" – 48") tall and capable of supporting at least 100 pounds of equipment and cables.
3. Patch Panels - All UTP patch panels specified in this document shall consist of a modular (RJ45) front to 110-type back connector system and shall be fully populated (all ports occupied by jacks). The panels shall incorporate sufficient cable support and/or strain relief mechanisms, including rear cable management/strain relief bars, to secure the horizontal cables at the termination block and to ensure adherence to all manufacturers' and standard minimum bend radius specifications.
4. Cable routing – All station cable located in the TR shall be loosely

## IFB 2010-25 REQUIREMENTS

bundled. Cable shall be routed along ladder rack or functionally equivalent cable tray when patch panels are rack-mounted. When patch panels are wall-mounted, cable traversing floor space shall be routed along ladder rack or functionally equivalent cable tray, while cable routed vertically along walls shall be routed using ladder rack, "D" rings, hook-and-loop type routing hardware or other re-enterable routing hardware.

5. Patch cable management – Provide and install in all Contractor-provided equipment rack(s) front-side wire management hardware consisting of at least four (4) three-inch (3") rings above and below each patch panel for horizontal patch cord routing, as well as side-mounted rings, channels, or equivalent retention hardware for vertical cable management.
6. Patch panel administration – The ports on the patch panels shall be labeled according to TIA/EIA-606-A (or latest revision or version of the TIA/EIA administration standard) unless otherwise requested by the Authorized User. If so requested by the Authorized User, separate patch panels shall be used for each floor or zone of the office space being cabled.
7. Patch cords – The Contractor shall supply manufacturer factory-terminated patch cords/work area cables which meet or exceed Category 5e and Category 6 specifications for patch cords as specified in ANSI/TIA/EIA-568-B for Category 5e and Category 6 copper cable runs installed (respectively), in the quantities specified by the Authorized User. Where the user requires patch cords as part of an overall cabling installation, Contractor shall supply cords of a sufficient length to allow neat and orderly patching between any two port positions based upon the rack layout agreed upon per number 8 below, but a minimum of three feet (3') in length.
8. Drawings – After execution of an order and before start of work, the Contractor shall submit for the Authorized User's approval a detailed drawing/diagram of each TR showing the exact locations/layout of all racks, equipment, cabling, and supporting hardware to be provided under the Contract. Detail drawings of each rack showing dimensions and placement of all patch panels, cable/cord management hardware, etc. within each rack shall be included.

### D. Horizontal Cabling Requirements

1. All copper wiring and cabling which terminates in work areas shall be installed and terminated in such a manner as to be fully compliant with the ANSI/TIA/EIA-568-B standard for Category 5e or Category 6 UTP wiring and shall conform to the standard eight-position jack pin/pair assignment designated T568A. The T568B pin/pair assignment may

## IFB 2010-25 REQUIREMENTS

only be used when all pre-existing cabling in the building being cabled is wired per T568B. In those cases, the Contractor shall ensure that all equipment racks and patch panels bear a sign clearly reading, "ATTENTION: PIN-OUT T568B IN USE."

2. The Contractor shall be required to provide a printout certifying each horizontal cable run as compliant with the ANSI/TIA/EIA-568-B specifications for Category 5e or Category 6 (as appropriate) UTP wiring permanent link via an electronic testing device specifically designed for that purpose. Cable certification printouts must show all relevant parameters for the category of cable under test and the relative performance of the particular link being tested, as well as an overall pass/fail rating. Improperly performed tests will not be accepted, including tests performed where the Nominal Velocity of Propagation (NVP) is not properly configured for the specific cable under test. All test results shall be provided in both electronic format and hard copy. Hard copies shall be sorted by cable ID and shall consist of no more than two cable test reports per page. Each page shall be signed and dated by the Contractor's responsible representative certifying that the link passed the test and that the test was performed in accordance with applicable standards and manufacturer's instructions.
3. For each work area requested by the Authorized User, the Contractor shall provide up to eight (8) four-pair Category 5e or Category 6 cables originating at the Contractor-provided patch panels in the appropriate TR and terminated on Category 5e or Category 6 RJ45 telecommunications outlets/connectors ("jacks") mounted in an appropriately-sized faceplate at the work area. All cables shall be "home-run" (one continuous cable segment from TR to work area telecommunications outlet/connector) except as allowed under section D.13.
4. Regardless of the number of jacks required in each work area, each Contractor-provided faceplate shall have at least three (3) ports. Wall-mounted faceplates shall be of a color agreed upon by the Authorized User to match the décor of the offices being cabled. Every jack shall be labeled according to TIA/EIA-606-A (or latest revision or version of the TIA/EIA administration standard) unless otherwise requested by the Authorized User. For all faceplates, any ports not populated with jacks shall be fitted with blanks.
5. For each wall telephone jack requested by the Authorized User, the Contractor shall provide one (1) four-pair Category 5e or Category 6 cable originating in the appropriate TR and terminated on a standard wall telephone jack mounted 48" above finished floor and in compliance with the Americans With Disabilities Act.

## IFB 2010-25 REQUIREMENTS

6. All plenum-rated cables shall be insulated 100% with FEP, and all suspension hardware and cable management materials installed within environmental air handling plenums shall be plenum-rated according to applicable codes. Non-plenum-rated cables and hardware shall be used only when they comply with all codes and are requested in writing by the Authorized User.
7. All cables shall be installed so as to be fully concealed within ceilings, walls and columns, and fished into modular furniture as required. All work area telecommunications outlets/connectors shall be in flush-mounted faceplates. Data/power poles shall be used only when there is no other feasible method of routing and concealing cables. Where it is not practicable to fish walls or otherwise conceal cable in ceilings and walls, the Contractor may use a Category 6 compliant surface raceway system and matching surface-mount outlet box, if applicable. Any poles or surface raceway systems installed by the Contractor must be approved in advance by the Authorized User to ensure that it is compatible with space plans and office décor.
8. Cable support hardware installed above suspended ceilings may not be mounted on or in any way supported by the ceiling grid, panels, support channels, or vertical ceiling supports such as ceiling support wires or rods. All cables routed above ceilings shall be suspended in keeping with all applicable standards and supported within conduit, cable tray, "J" hooks, or functionally equivalent open-top support systems. Cables shall not sag more than 12" between cable supports. Of course, TIA/EIA standards for spacing, routing, and cable sag shall be followed. Cables shall be loosely bundled and follow hallways and common areas and be installed in keeping with TIA/EIA recommendations.
9. Each Contractor-supplied horizontal cable shall incorporate a minimum of six feet (6') of "service slack" located in the TR, plus enough additional cable length to allow any cable to be relocated within the patch panel while still maintaining the minimum six feet of slack.
10. The Contractor shall, at the request of the Authorized User, supply color-coded horizontal cabling and jacks to facilitate distinguishing between cables of different categories or cables intended for different purposes. A minimum of three (3) distinct colors of horizontal cabling, patch cables and matching jacks/inserts shall be made available for each category of cable.
11. The Contractor shall label each element of the cabling system according to TIA/EIA-606-A using the appropriate administration class, unless otherwise specifically instructed by the Authorized User. Where horizontal cables terminate in wall boxes at the work area, their labels shall be located within the wall boxes.

## IFB 2010-25 REQUIREMENTS

12. All components shall meet all applicable building codes and requirements.
13. When requested in writing in advance by the Authorized User, the Contractor shall supply cabling for open office spaces to include multi-user telecommunications outlet assemblies (MUTOAs), consolidation points (CPs), and transition points (TPs). Any open office-type cabling systems shall be installed according to the applicable ANSI/TIA/EIA standards.

### E. Miscellaneous Cabling Services

Miscellaneous cabling services shall include, but not be limited to, the field testing, documentation, labeling, cross-connecting and troubleshooting of previously installed cabling systems.

### F. Abandoned Cable

The Contractor shall, at the request of the Authorized User, remove "abandoned" telecommunications cable from building pathways and spaces. Abandoned cable is defined as installed cable that is neither terminated at both ends at a connector or other equipment, nor identified for future use with a tag. Abandoned cable may only be removed at the direction of the Authorized User or to avoid a code violation. The Contractor shall notify the Authorized User in writing of the presence of any abandoned cable that is in violation of the National Electric Code.

### G. As-built Drawings

The Contractor shall maintain in good order for the duration of work at each site one complete set of as-built plans supplied by the Authorized User. These plans shall be used for reporting any changes made during the job and to denote exact locations of equipment, cable routing, terminations, and outlets. The plans shall be kept up-to-date always as the work progresses and as any changes occur. At the completion of the work, this set of plans shall be turned over to the Authorized User as a permanent record.

### H. System Acceptance and Performance Requirements

1. Upon completion of work ordered under this Contract, the Contractor shall notify the Authorized User for the purpose of scheduling a joint inspection of the work. No acceptance period shall begin until after the Authorized User has been given an opportunity to perform a thorough inspection of the completed work.
2. Each system will be accepted by the Authorized User after the Contractor satisfies the following requirements:

## IFB 2010-25 REQUIREMENTS

- a) Delivery and installation of all required equipment and material.
  - b) Delivery of all required documentation.
  - c) Successful completion of performance period.
3. A performance period of thirty (30) calendar days of twenty-four (24) hours each wherein the system operates without a failure shall constitute a successful performance period.

### I. Delivery and Storage

1. The Contractor shall be responsible for making the arrangements for the delivery, unloading, and storage of materials and equipment required to install cabling systems.
2. The Authorized User will assume no responsibility for receiving any equipment and/or materials shipped to the Authorized User's premises by or on behalf of the Contractor.
3. No space will be available for long-term storage of material and/or equipment.
4. In providing storage for the convenience of the Contractor, the Authorized User assumes no responsibility for items that may be lost, stolen, misplaced, damaged, or destroyed.

### J. Quality of Work

1. All equipment, cables, wiring, outlets, etc. shall be installed in a neat and orderly manner.
2. The Contractor shall assign only competent supervisors, technicians, and laborers to work on projects initiated under this Contract.
3. Upon receipt of written notification from the Authorized User, the Contractor shall immediately relieve any person(s) determined to be incompetent or disorderly of all responsibilities for further on-site work and/or contact with the Authorized User for the duration of this Contract.
4. All bidders must currently hold a valid Virginia State Contractor's "A" or "B" License and Registration with an "Electrical Contractors" classification (ELE) or a "Special Services Classification" to perform "Electronic/Communication Service Contracting" (ESC).
